

NEERAJ KIRAN JANAKULA

AI/ML Engineer, Satellite Systems Enthusiast, Full-Stack Developer

LinkedIn | GitHub | neerajkiran26@gmail.com | +91 6364752666 | Bangalore, India

Education

REVA University Bachelor of Technology in Artificial Intelligence & Machine Learning	Bangalore, India 2025 – Expected 2029
Nagarjuna Pre-University College 12th Standard – PCMC (Physics, Chemistry, Mathematics, Computer Science)	Bangalore, India 2023 – 2025
Euro School 10th Standard – ICSE Board	Bangalore, India 2023

Skills

Languages:	Python, JavaScript, TypeScript, C, C++, SQL, HTML5, CSS3, Dart (Flutter)
Technologies:	React.js, Next.js, Node.js, Express.js, Flutter, TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas, OpenCV, Machine Learning, Deep Learning, NLP, Computer Vision, Generative AI, RAG, AI Agents, MLOps, Arduino, ESP32, Embedded C/C++, CanSat, CubeSat Payload, Telemetry Systems, Git, Docker, Linux, Figma, Postman, Jupyter, GCP, Firebase, Vercel, PostgreSQL, MongoDB

Professional Experience

Startup Venture Co-Founder & Chief Technology Officer	Bangalore, India 2025 – 2026
- Architected and led end-to-end development of the startup's core product, managing full-stack frontend, backend APIs, database design, and cloud deployment. - Partnered with the founding team to transform product concepts into a functional MVP and defined the complete technical roadmap. - Drove all technology decisions including system design, stack selection, and product development strategy. - Earned recognition as a Top 100 Team in SmartIDEathon 2025 among thousands of competing teams at the ideation stage.	
AI/ML Research – CubeSat Payload Project Machine Learning Lead (Research)	Bangalore, India 2026 – Present
- Researching AI/ML techniques for real-time prediction of NavIC/GNSS ionospheric scintillation and automated interference classification in CubeSat payload systems. - Developing predictive time-series models to enhance satellite navigation performance under adverse space-weather conditions. - Investigating advanced signal processing methods and space-weather data analytics for autonomous satellite-based decision-making. - Contributing to intelligent payload architecture design for next-generation small satellite systems.	

Projects

CanSat Live Telemetry System – Demo Here Open-Source Aerospace & IoT Education Platform Arduino / ESP32 / Embedded C++ / GPS / Telemetry	Bangalore, India 2025
- Won 1st Prize at IoT Expo — built a comprehensive, end-to-end CanSat platform covering hardware assembly, embedded firmware, real-time telemetry, and ground-station communication. - Integrated environmental and GPS navigation sensors with ESP32 for live atmospheric data acquisition and wireless transmission. - Published as an open-source educational resource bridging embedded systems, IoT, and satellite engineering for students and makers. - Demonstrated full mission lifecycle: design → build → deployment → data analysis, mirroring real satellite operations.	
ResQ – AI-Powered Emergency Response Platform – Demo Here Full-Stack & AI/ML Developer React.js / Node.js / Python / MongoDB / GCP	Bangalore, India 2026
- Developed an AI-powered emergency response platform with voice-to-text reporting, ML-based request classification, and real-time location-aware coordination workflows. - Built a secure REST API backend with full-stack architecture connecting affected individuals to responders and resources under high-stress conditions.	

- Submitted to the Google Build with AI Challenge, demonstrating applied AI/ML for real-world social impact and disaster management.

Certifications

Certificate of Proficiency (Startup & Entrepreneurship)

Wadhvani Foundation

2026

[View Credential](#)

Python for Data Science, AI & Development

IBM

2026

Python Programming

Codedex

2025

[View Credential](#)

Achievements

- **1st Prize – IoT Expo (2025)** for CanSat Live Telemetry System — recognized for excellence in embedded systems, IoT integration, and aerospace engineering application.
- **Top 100 Team – SmartIDEathon 2025** among thousands of competing teams nationwide, recognized at the ideation stage for innovation and technical concept.
- **Google Build with AI Challenge (2026)** — developed ResQ, an AI-driven emergency response platform, showcasing real-world application of ML and full-stack development.

Languages & Interests

Languages: English, Hindi, Telugu, Kannada, Tamil

Interests: Space Exploration & Satellite Systems, Game Development, Trekking, Open-Source Development
